

cplace

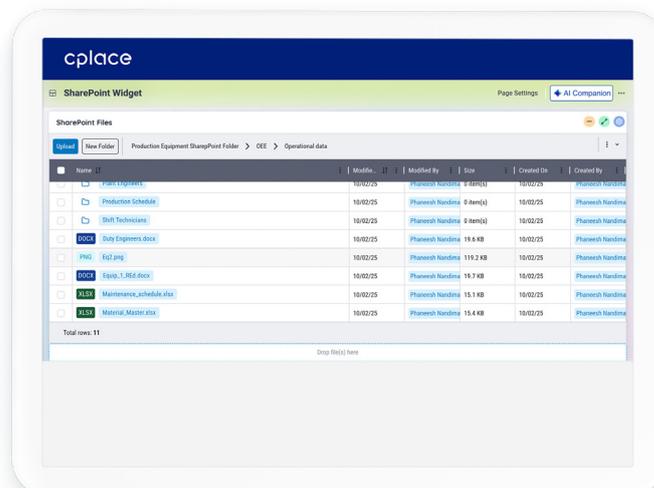

Integrated project and document management

SharePoint Connector

The cplace *SharePoint Connector* delivers seamless integration between cplace project management and Microsoft SharePoint document management, enabling users to access, manage, and interact with SharePoint files directly within cplace without switching applications. This unified workspace solution optimizes workflow efficiency by maintaining and respecting

SharePoint's user permissions and enabling document organization at page level in cplace. Users can view drives, manage files and folders, and collaborate on documents in their native applications while preserving project context, all through utilization of existing SharePoint storage infrastructure.

SharePoint Connector functions as a window providing SharePoint access in cplace

Execute comprehensive file operations directly from cplace environment

Create and manage folders with configurable widget settings

Business Challenge

Enterprise project and portfolio teams managing complex projects face fragmented workflows when documents are managed in separate systems. They need centralized access to project-related documents across project, portfolio, and committee levels with collaborative capabilities and role-based access control without having to switch applications.

Customer Benefits

Organizations achieve elevated productivity through integrated project and document management, while teams gain seamless Microsoft SharePoint access that maintains rigorous security standards. This streamlined integration enables enhanced collaboration and maximizes value from existing infrastructure investments.

Special Features

- 1. Integrated SharePoint Access:** Provides direct embedding of the SharePoint widget within cplace pages to enable direct access to drives and folders. This delivers seamless document management and operational continuity across project environments.
- 2. Native Permission Management:** Automatically respects and maintains all established SharePoint user permissions and authentication settings, ensuring secure access control while allowing users to work within their authorized permission levels.
- 3. Contextual Document Organization:** Allows users to organize and connect documents within relevant pages in cplace. Users benefit from familiar SharePoint navigation patterns and folder structures that maintain intuitive experiences across platforms.
