Plan, visualize and communicate strategic and operational ventures intuitively

Visual Roadmap

The Premium Application **Visual Roadmap** is a visualization tool for operational and strategic corporate planning and communication. It enables the successful management of roadmaps - whether in product development, release planning and go-to-market strategies, project management, as a portfolio overview or to promote innovation.

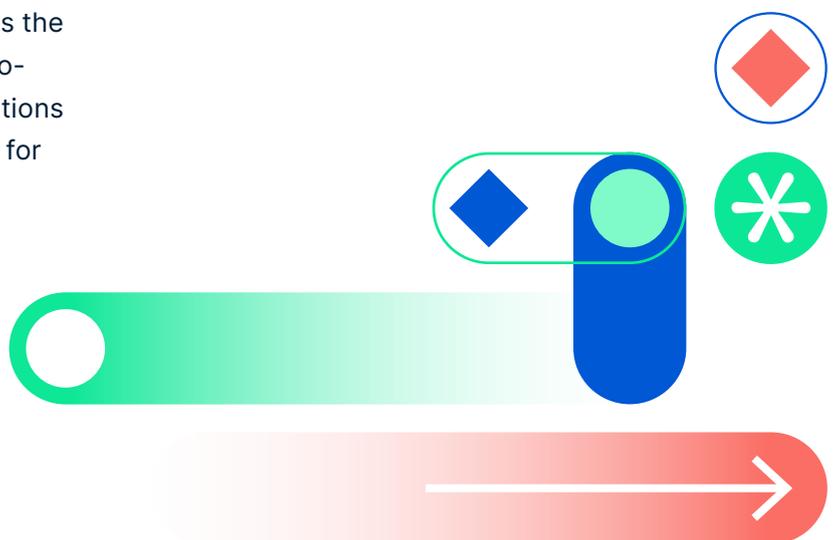

The visualization can be customized to support a wide range of use cases and is as flexible as the way people work. It transforms data and processes into easy-to-understand representations and offers user-centric interaction features for

intuitive operation. Thanks to its clear design, even complex interrelationships can be communicated efficiently and well-founded decisions can be made quickly.

VISUALISTIK**

Group and drill down to explore structured data

Mapping of key features and milestones for maximum knowledge gain

No-Code and Low-Code configuration for adaptation to a wide range of use cases

Business Challenge

Roadmaps are used to effectively coordinate and manage projects and strategies. This is achieved by clearly mapping all planning steps - provided that the presentation is adapted to the specific challenges of a project. Complexity must be reduced without creating knowledge gaps.

Customer Benefits

See all components of a plan at a glance with the Premium Application **Visual Roadmap**. Leverage enterprise data from multiple sources to streamline processes, identify bottlenecks, and achieve goals. The easy-to-use configuration enables multiple use cases with just one application.

Special Features

1. A three-level grouping provides a clear structure of related time data. Stakeholders can drill down from the overview to the details. This provides them with specific information quickly and easily, without losing the current context.
2. Visualization of key features and milestones ensures maximum visibility. In addition to deadline data, other properties can be visualized using color, shape, and icons. This makes it easy to identify patterns and correlations, track progress and status, and highlight key information.
3. No-Code and Low-Code make it possible to create any number of variants of the **Visual Roadmap** without much prior knowledge. Data can be viewed in its structures from the top down as well as from the bottom up. The mapped data types and their groupings are flexible and the visualization of properties can be dynamically configured.
