

# cplace

Agile task management for  
smooth collaboration

## Digital Board

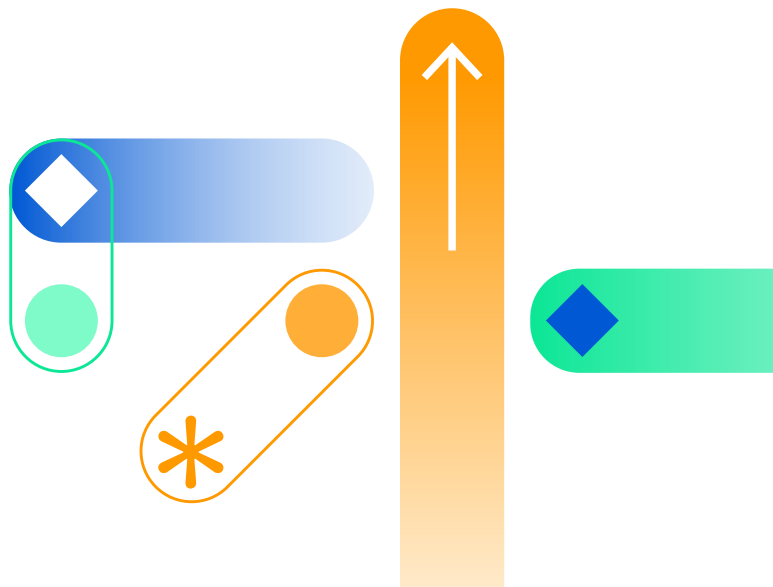

With the cplace *Solution Template Digital Board*, companies ensure modern, digital collaboration even in distributed teams and across locations.

Through Kanban-style task management, the board provides the basis for efficient self- and team organization. Teams can plan and prioritize project and line tasks, and the current progress is always transparent.

The *Digital Board* makes communication channels shorter and makes sure everyone knows what they have to do and what their priorities are.

The number of boards is unlimited, and entries can be linked through customizable workflows. The same information can be given to several departments on different boards. Conversely, teams can request assistance or report escalation needs across departments.

**High transparency  
through intuitive  
and collaborative  
Kanban-style task  
management**

**Networking between  
boards allows for  
seamless coordination  
across team bounda-  
ries**

**Seamless integration  
into complex project  
worlds and organiza-  
tions**

## Business Challenge

Companies operate in increasingly complex environments and have to adapt at high speed. As a result, tasks in the company must also be completed in parallel and distributed across locations and teams. This puts increasing pressure on employees, teams, departments and the organization as a whole. This can lead to delays, quality losses, a high manual effort, and a lack of transparency and decision-making ability.

## Customer Benefits

With the Digital Board, cplace enables transparency and active communication across all project and line levels at all times, even in dynamic situations. The proactive involvement of all participants and networking via the boards not only increases transparency – it also demonstrably improves quality and efficiency in projects and processes

## Special Features

1. Through the networking capabilities of boards, cplace enables real-time up-to-date information and proactive communication about the status and progress of boards even across teams.
2. Agile and classic working methods can be combined flexibly. Both the assistance in the team and a possibly necessary escalation are supported by the system. As a result, teams can find solutions quickly and solve problems directly.
3. Authorized users can implement adjustments to individual and changing requirements themselves at any time, even without programming skills thanks to cplace No-Code and Low-Code. In this way, visualizations, dashboards and reports can be continuously improved and lessons learned can be implemented directly in the system.
