Agile scaling
to enterprise

Full SAFe Suite

Full SAFe is the most comprehensive version of the Scaled Agile Framework and helps organizations build and develop complex products and solutions. It includes all the capabilities needed to drive agility in the enterprise.

The cplace *Solution Template Full SAFe Suite* is the sum of all cplace solutions around the SAFe framework. It emphasizes the incremental release of solutions over a longer period of time and makes it easier for those responsible to scale agile practices in a growing team.

The goal of comprehensively scaling agile practices at the enterprise level is improved collaboration and higher product quality, leading to faster time to market.

**Modular structure,
all SAFe levels can
be used individually**

**Overview of the
entire organizational
structure is guaranteed
at all times**

**Coexistence with
Jira is possible,
but not required**

Business Challenge

Companies face the challenge of investing heavily in digital and agile transformation, but implementation often falls short of expectations. A gap between executive and decision-making teams makes optimal coordination difficult. Complex, enterprise-wide tasks require an adaptation of agile principles, as they often go beyond the scope of a single ART and require additional roles, artifacts, and coordination.

Customer Benefits

The cplace *Full SAFe Suite* is a complete digital SAFe solution that optimizes collaboration, visibility and adaptability for large organizations. Organizations are empowered to make informed decisions and accelerate the delivery of their products and services by simply aligning their teams with Agile principles.

Special Features

1. Full SAFe encompasses all levels of the Scaled Agile Framework and provides a structured method for planning, executing and managing programs and projects.
2. Each SAFe function or role, whether product manager, software architect, or team member, is able to know where it stands at any given time for its corresponding "SAFe artifact" level.
3. The introduction of SAFe into the organization can be gradual and flexible. From starting in small teams, to solution trains, to an interconnected, fully coordinated enterprise on the path to successful agile and digital transformation.

The cplace *Solution Template Full SAFe Suite* combines the independently working cplace Solution Templates

- Lean Portfolio Management
- Large Solution SAFe
- Essential SAFe
- Team SAFe
