Work in agile and collaborative ways towards common goals

OKR

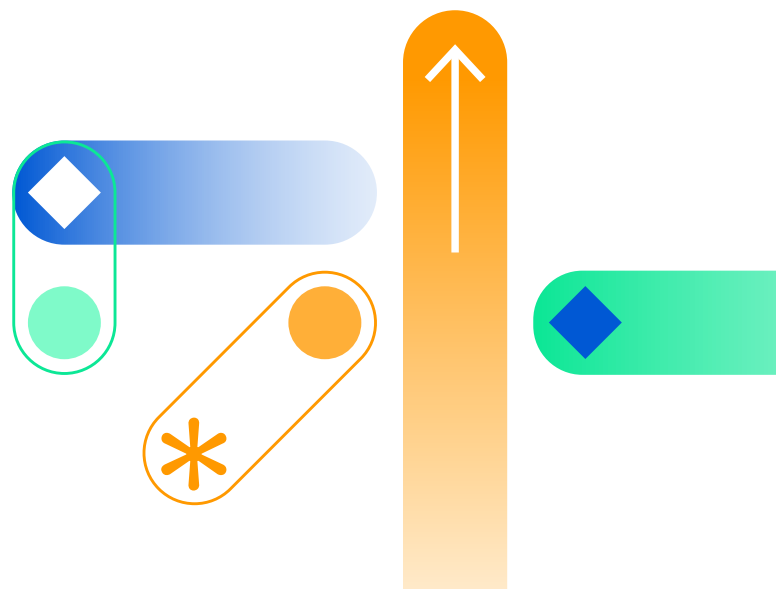

The cplace Solution Template **Objectives and Key Results (OKR)** efficiently supports the corresponding management framework. The secret of the methodology's success? Transparency, communication and active participation of all employees.

As the digital home of the entire OKR organisation, the Solution Template **OKR** provides an information and collaboration hub where companies communicate their strategic goals clearly and centrally accessible. There, they can also record the progress of tasks and projects of contributing teams.

Using the solution template, set leads can prepare, coordinate, execute, evaluate and archive each OKR cycle. Employees contribute collaboratively to the development of new sets and can get an overview of interfaces with other teams and the current level of progress.

Collaborative integration of teams in the set creation process

Progress Indicators: Capture progress at a glance

Flexible adaptation to the individual design of the methodology

Business Challenge

The OKR framework should give teams a clear picture of goals and security in their personal prioritisation. This can only be achieved through transparent communication and robust monitoring of the relevant KPIs. In many companies, however, the tooling lags behind the innovative methodology. Static Excel lists do not meet the requirements for real-time information and collaborative work.

Customer Benefits

Instead of an isolated solution, this solution template fits seamlessly into the existing cplace solution landscape. In this way, the connection to the strategic corporate roadmap. It enables direct exchange with the operational task and project management in the teams. On the one hand and to the operational processing of the OKR sets on the other hand is successful.

Special Features

1. Already in the preparation phase, teams are supported in the collaborative creation of new OKR sets. With the help of the integrated task management, they also organise themselves efficiently during processing and have an overview of their progress at all times. Authorisations control access to sensitive information.
2. Set-Leads track the progress within an OKR cycle using common KPIs and identify problems with just a few clicks. Progress indicators - meaning (interim) results, problems, learnings and next steps - are centrally accessible to the entire OKR organisation.
3. The Solution Template supports the entire OKR organisation in preparing the relevant meetings and workshops with agendas, templates, scheduling and an organisational function for the process. Integrated process know-how in the form of checklists and manuals provides additional support.
