Workflows streamline scheduling processes and wizards simplify scheduling and administration.

Charts provide information on resource situations, schedules, and potential bottlenecks.

Flexible and can always be adapted to the company's needs.

Business Challenge

Limited resources, lack of visibility and communication, and technological and organizational barriers often prevent projects from being completed on time and within budget. Scarce resources are usually underutilized, resulting in lower productivity and quality and, in the worst case, missed business objectives.

Customer Benefits

The cplace *Solution Template Resource Planning for Projects* supports project-based matrix organizations in the effective allocation and effortless management of their various resources. Project managers, line managers, and finally the management get complete transparency about current projects, resources, and their aggregated utilization situation.

Special Features

1. Identify needs, coordinate, and control resources. Gain a comprehensive view of the availability and utilization of people, materials, and skills, enabling you to allocate them optimally.

2. The easy-to-use and intuitive interface simplifies the process of planning and assigning resources to projects. Project planners always have full visibility into the allocation and coverage of all resources, including the creation and management of forecasts and requirements based on roles and responsibilities.

3. The Solution Template is based on industry best practices and helps organizations optimize resource allocation and improve project outcomes, It also enables easy implementation of customized resource management strategies to meet specific business needs.
