## AI Companion

Enterprise AI that turns conversation into action

### cplace AI

*cplace AI Companion* transforms your cplace experience through **natural language interaction**—simply chat with it as you would with a colleague. This enterprise-ready chat not only **understands your entire cplace environment** but also **executes tasks** on your behalf. With comprehensive visibility across all your portfolios, projects, risks, and resources, it delivers **actionable insights** while directly creating pages, updating workflows, modifying timelines, and more based on your conversational requests.

#### Highlights

- Converse naturally with an assistant that understands and acts on your business context
- Complete access to all data you are allowed to see with the ability to create and modify content on your behalf
- Ready immediately with zero configuration, full security compliance, and flexible AI model choice (BYOK)

## Business Challenge

Business users struggle to efficiently navigate information scattered across multiple workspaces. **Finding connections** between projects, identifying emerging risks, and accessing comprehensive portfolio data typically require technical expertise and significant time investment. This **information fragmentation** creates **productivity bottlenecks** and prevents teams from realizing the full value of their organizational data.

## Your Benefits

*cplace AI Companion* **eliminates traditional barriers** between users and their business data. By providing a conversational interface that **both understands and takes action** within your *cplace* environment, it **dramatically accelerates workflows** while requiring **no technical setup**. Users can make informed decisions faster and discover previously hidden connections—all while maintaining **enterprise security standards** and retaining **full control over their AI model selection** through BYOK (Bring Your Own Key).

### Special Features

- **Takes Action on Your Behalf:** Beyond answering questions, the *Companion* actively creates pages, updates workflows, modifies timelines, and executes tasks based on your conversational requests—transforming natural language instructions into completed work.
- **Context-Aware Intelligence:** The *AI Companion* understands the relationships between different parts of your *cplace* environment. Whether you're discussing projects, resources, or timelines, it recognizes the business context of your conversation and provides relevant insights and actions without requiring you to switch contexts or explain connections.
- **Strategic Decision Support:** Transform organizational decision-making with insights that span your entire data landscape. The *Companion* identifies patterns, highlights risks, and reveals opportunities across workspaces that would be difficult to discover manually, enabling more informed strategic planning and resource allocation.
