Democratizing Artificial Intelligence
in Project Management

cplace Citizen AI

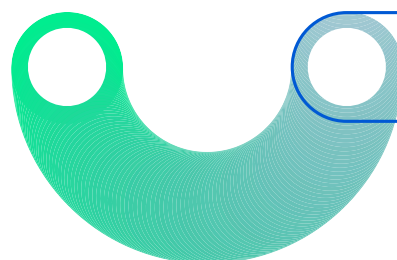

Artificial intelligence has long been a part of everyday business. Organizations have recognized the benefits that GenAI can offer them: increased operational efficiency, better business decisions, and a competitive edge.

With *cplace Citizen AI*, companies are able to automate complex tasks and reduce the need for technical expertise. Work can be done quickly, accurately, and automatically.

cplace Citizen AI is a powerful extension of the cplace platform using generative AI. It enables citizen developers to create internal AI with its low-code and no-code capabilities. This allows all cplace users within an organization to benefit from new AI-driven productivity and efficiency.

Business Automation:
Increase productivity
and efficiency by
automating repetitive
processes

Scalable:
Flexible and
customizable for a
wide range of use
cases

AI Integration:
Complete flexibility
to select or integrate
your own AI models

Business Challenge

Organizations face significant challenges when implementing AI: Compliance requirements and data sovereignty must be ensured without exception. The lack of technical experts makes implementing and adapting to changing requirements difficult. In addition, high data quality is essential to achieve reliable results.

Customer Benefits

cplace Citizen AI allows organizations to take full advantage of generative AI in project management while retaining control over its use and customization to their specific needs. This flexibility ensures that corporate standards and compliance requirements are met and data sovereignty is always maintained.

Special Features

1. Bring Your Own“ Principle

Companies are completely free in the choice and number of AI providers they want to use, such as Microsoft Azure OpenAI, OpenAI, Google Vertex AI Gemini, and many more. This ensures IT compliance requirements are met.

2. GenAI-„Need to Know“ Principle

Enterprises have complete data sovereignty at all times. They determine what data can be processed in different use cases based on context. The authorization system protects sensitive information.

3. Centralized AI Control for Consistent Results

Centralized management of dynamic prompts and AI assistants ensures consistent and contextual results across multiple use cases. Targeted customization of prompts ensures that the generated answers are optimally tailored to the respective requirements.
