

cplace AI - Project and Portfolio Management Built for the AI Era

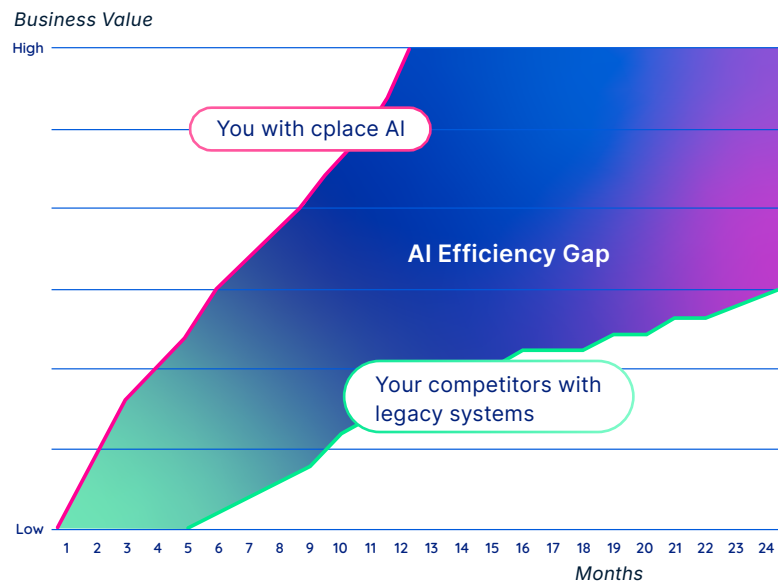

Empower everyone, accelerate everything.

cplace AI transforms how organizations manage complex projects and portfolios by **bringing the power of artificial intelligence directly into your daily project work**. Built from the ground up for enterprise project management, our solution delivers **complete data sovereignty** and seamless integration with leading AI models.

Experience rapid implementation and immediate impact. Your teams gain **intelligent assistance** that understands project contexts and methodologies while you maintain full control over your data and compliance requirements. cplace AI empowers everyone in your organization to **work faster, decide smarter, and achieve more**. The data is compelling:

- 80% of project management tasks will be eliminated by 2030.
(Source: Daniel Stang/Gartner)
- Early adopters are already seeing 40% productivity boosts.
(Source: Harvard Business Review)

You have a 12-month window for efficiency gains before your competitors catch up.

Right now, there's a gap. Your competitors are still implementing legacy AI solutions that take 6-12 months to roll out. Most are **retrofitting old systems**, creating friction rather than speed. This is your window to **become the fast mover**.

Why cplace AI is Different

While legacy vendors patch AI onto 20-year-old architectures and platform giants offer generic AI that doesn't understand PPM, **cplace AI was built from the ground up for the AI era.**

Built for PPM, not generic tasks

cplace AI recognizes project contexts, risks, and methodologies. It orchestrates traditional, agile, and hybrid approaches intelligently, delivering **PPM-specific insights that understand your reality.**

Most AI tools sit on top of your data—cplace AI works *inside it*. Because cplace AI is built directly into your project architecture, it doesn't just analyze numbers. **It understands the context:** how your projects connect, why decisions were made, and what's really driving performance.

This means you get **AI tailored to your specific workflows**, not generic suggestions that miss the mark. Whether you're a project manager tracking milestones or a portfolio lead balancing strategic priorities, cplace AI delivers **insights that fit your role**—built into the platform you already use to manage your projects.

The result? **A complete AI ecosystem** that empowers everyone on your team: from end users making better decisions, to builders creating custom AI solutions for your specific needs.

Value from Activation to Strategy

➤ Strategic intelligence

cplace AI enables leadership to make data-driven decisions at speed. It provides risk predictions, resource optimization, and portfolio insights to allow leaders to spend time on decisions, not data collection.

➤ Process transformation

Teams work smarter, not harder. Intelligent project structuring, data analysis, and workflow optimizations help them save time and gain efficiency.

➤ Immediate impact

Every user gains productivity from day one – whether through content optimization, translations or document summaries.

The Pillars of cplace AI

Chat & Companion

provide **natural language interaction** with your project data. Ask questions, get instant answers—no manual report generation required.

Assistants

are **specialized AI personas** (PMO Specialist, Risk Manager, Data Analyst) for specific PPM contexts and dedicated business tasks. They provide **role-specific support** that understands your methodology.

Agent

works proactively without you having to ask. It starts via triggers, data, or time points—monitoring, analyzing, and acting automatically. This is the shift from reactive to **proactive project work**.

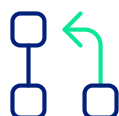

Citizen AI

empowers non-technical users to **build custom AI solutions** directly within the cplace platform using intuitive **Low-Code and No-Code tools**. Rather than providing pre-defined AI features, it gives your teams the flexibility to integrate generative AI into any workflow or process that makes sense for your organization.

MCP (Model Context Protocol)

enables seamless integration between cplace and leading enterprise AI models (like Claude, ChatGPT...), your enterprise chat or any MCP-ready client. Through this **open protocol**, your AI tools can directly access and **interact with cplace data, creating a unified ecosystem where different AI services work together** intelligently. This means you can leverage your preferred AI platforms while maintaining cplace as your central project management hub—currently available in Beta.

cplace AI Builder

revolutionizes solution development by **using artificial intelligence to create data models and layouts automatically**. This makes digital transformation as simple as uploading an existing Excel file and transforming it into a cplace workspace. Instead of manual configuration, you describe what you need and the Builder **generates intelligent, optimized cplace solutions** with guided automation. This dramatically accelerates implementation time while ensuring best practices are built into your project management environment from the start—coming soon.

The core principle

AI amplifies human expertise rather than replacing it. Leadership remains with your people. AI handles routine work so teams focus on high-value activities.

Real Value in Action

Explore these compelling use cases that illustrate the transformative potential of cplace AI in enterprise project management.

Strategic Project Prioritization:

Ask complex questions like “Which projects align best with our supply chain independence strategy?” and receive instant, tiered prioritization with strategic rationale—all within seconds.

Natural Language Creation:

Simply describe what you need in conversation—projects, structures, reports—and cplace AI creates and integrates them instantly.

Implementation Scenario Planning:

Request alternative scenarios and receive comprehensive implementation options complete with trade-offs, resource implications, and strategic impact analysis.

Automated Portfolio Execution:

Make strategic decisions through simple commands and let cplace AI automatically restructure your portfolio, update timelines, and recalculate all dependencies—without manual intervention.

Enterprise Scheduling Intelligence:

Daily automated insights on milestone changes, emerging risk areas, and portfolio health indicators delivered directly to decision-makers.

cplace AI Scheduling Intelligence in action

Enterprise-Grade Security by Design

Data Sovereignty & Compliance

- You control what AI accesses— the „AI Need-To-Know“ principle
- ISO 27001, ISO 9001 certified, TISAX-tested, GDPR-compliant
- German data centers, role-based access, complete audit trails
- No models are trained with your data
- Bring Your Own Key (BYOK): Use your own AI provider credentials for full data control and cost transparency
- Your data remains more secure than in any local system

cplace AI

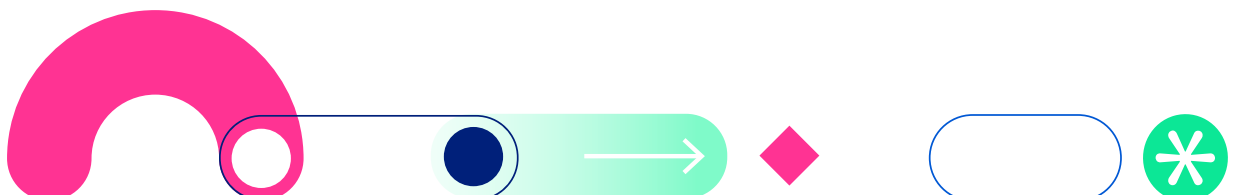

Ready to Lead the AI Revolution in PPM?

The question isn't whether AI will transform PPM—it's whether you'll lead the change or run after it.

Your 12-month competitive advantage window is open now. Early movers are already pulling ahead.

Schedule a talk with our experienced AI experts - you'll be amazed at how cplace AI can also boost your PPM efficiency!

cplace is a modern software platform for project and portfolio management (PPM). It revolutionizes and transforms the way people and organizations collaborate, enabling companies to efficiently manage complex projects. cplace combines the reliability of standard software with the flexibility of customized solutions. The adaptive platform with built-in AI provides a unified data foundation, promotes cross-site and cross-functional collaboration, and can be adapted in real time.

International industry leaders, including those in the automotive, aerospace, pharmaceutical and life sciences, and mechanical engineering industries, rely on cplace. Behind the cplace brand is collaboration Factory GmbH, founded in 2014 and headquartered in Munich, Germany.
