

## Presentation Graphics app

Supports common layouts and export

<mark>اي</mark>

Save time by creating and reusing report templates

Create customized report visualizations

The Presentation Graphics app enhances the scheduling functionality in cplace by adding a powerful solution to extract project planning information, e.g. from a Gantt diagram. Use the app to create project presentations for stakeholders, such as project members who do not work with cplace. Generate custom reports with just a few mouse clicks, and export them in PDF, PNG or PowerPoint format. Use the intuitive web configurator to select the desired project information and edit it visually as desired. The preview window lets you see what the results of your visualization and customization work will ultimately look like. You can save the chosen settings in a profile that can be reused and shared. This way you will always have a convenient template that is based on your individual visualization preferences.

## **Business Challenge**

Visualizations and reports reflecting the current project status or sections from the project plan are frequently used as a basis for discussions in meetings or in presentations, whether on screen or on paper. But creating visually appealing, well organized, easy-to-read reports in PowerPoint or similar applications is time-consuming, and the results are often not visually satisfactory, especially when you're trying to present complex, voluminous charts or schedules.

The cplace Presentation Graphics app is an efficient tool that allows you to generate professional-looking reports quickly and effortlessly. Thanks to a broad range of intuitive visualization tools, the app lets you customize your reports to suit the given requirements. Create compelling reports with just a few mouse clicks, no matter how complex the schedule.

## Special features

- 1. The app provides a high level of flexibility. Select common page formats (e.g. A4, A0) directly or define your own formats. Report files may be exported in PowerPoint, PDF or PNG format.
- 2. The app offers a wide range of features to edit the design of your report: You can individually define the columns and rows of the schedule you want to include, select type fonts and styles, and choose the preferred visual representation of event classes or the project schedule granularity. There is also a host of choices for depicting roll-up rows, reference dates or milestone distances.
- 3. Save all your customized visualization settings in the app so you can reuse them to minimize the amount of time and effort that goes into your next report. You can also share your settings with other users: An access authorization scheme lets you decide whether your shared or reused settings can be overwritten or not. All this enables you to standardize your report formatting.
